I Semester M.B.A. (Day & Eve) Degree Examination, July- 2029

MANAGEMENT**Economics for Business Decisions
(CBCS Scheme 2019 Onwards)****Paper : 1.4****Time : 3 Hours****Maximum Marks : 70****SECTION - A**Answer any **Five** of the following questions. Each questions carries **5** marks. **(5×5=25)**

1. Managerial Economics is applied in Decision making process. Explain.
2. What is the shape of demand curve in the perfect competition? Give reasons.
3. Distinguish between extension of demand and increase in demand.
4. Discuss the factors which accounts for increasing returns to scale and decreasing returns to scale.
5. What are ridge lines? Explain its importance in production.
6. What is a trade cycle? What are its various phases?
7. Find the cross elasticity of demand between X and between Y and Z for the data in table given below.

Commodity	Before		After	
	Price Rs/Unit	Quantity	Price Rs/Unit	Quantity
Y	8	150	6	200
X	4	100	4	75
Z	10	6	12	5
X	4	100	4	90

SECTION - BAnswer any **Three** of the following questions. Each question carries **10** marks. **(3×10=30)**

8. A company has the following data, Estimate Sales for 2022.

Year	Sales (Rs. in '000)	Year	Sales (Rs. in '000)
2018	100	2018	140
2019	107	2019	181
2020	128	2020	192

[P.T.O.]

9. How is the measurement of national income done in India? Explain the main difficulties in this regard.
10. Define Oligopoly. Explain the concept of Price rigidity and collusion in Oligopoly.
11. Multiplexes in India raises price of tickets during peak hours. What type of pricing strategies are used by movie theatres? Why? Explain the concept of type of pricing strategies and its elements.

SECTION - C

12. **Compulsory.** (1×15=15)

The changing lifestyles of Indian consumers, alongside an increase in nuclear families, have been fuelling the trend of out - of - home consumption of food. This market's growth is further sustained by the rise in working population and the spurt in disposable incomes which have resulted in higher expenditure on eating out/ordering-in. It is envisioned that these factors, along with other growth drivers, will continue to propel the market's growth over the short to long term. The spurt in the number of double - income households, is also instrumental to the restaurant market's growth. In essence, it is the convenience offered that builds the image and business of Restaurant.

The demand of a restaurant is likely to be very elastic and downward sloping because there are many other food outlets available to customers with differentiated product, But the demand is not perfectly elastic (i.e. horizontal) because, each restaurant has something to offer other restaurants do not: for instance, convenience, location, elaborate menu, or just atmosphere. There is no barrier of entry or exit. A restaurant should accept customers as long as the additional or marginal revenue exceeds the additional or marginal cost of the last meal served. This seems to be apparent in the reservation process which limits the number of patrons. Without reservations, the restaurant would either have to serve customers in overcrowded conditions or make them wait online. All successful restaurants have scores of imitators. Non price competition is very evident in restaurant industry. For instance, several chains have attempted to duplicate McDonald, and siphoned some of its customers and profits. But McDonald has fought back with extensive advertising. Brand name producers have a variety of means to make their products special to customers. Most important is advertisement which generic item producers would obviously not use.

Questions :

1. Which type of market competition this case belongs? Give justification of your answer with suitable examples.
2. What are the various ways of non - price competition prevailing in Restaurant industry?
3. Do you think that the economic effect of non - price competition is an overall undesirable loss of allocative and productive efficiency : the customer pays more and is able to buy less? Give your arguments for or against non - price competition.
